

Geofencing

Geofencing is a technology that uses satellite positioning to establish an accurate location with latitude and longitude. When using Breeze 360 geofencing, a company can set boundaries for employees at a designated location.

Available with Breeze 360 Professional, our time and attendance software with GPS Geofencing features makes it easy for remote employees, and teams with multiple locations, to punch in, collect and track time, as well as know who is working at which locations.

The Benefits of Geofencing

Multi-Site Management

Set up as many work locations as you need. Keep track of attendance and productivity remotely and instantly.

Auto-Punch

With the Breeze 360 mobile app your employees can be punched in and out simply by entering or leaving the boundary set by management.

Live In/Out Board

After designating work locations, you can view employee work status and location instantly. Sort employees based on their respective worksites if you have multiple locations.

A Flexible Tool to Automate Time & Attendance

Dashboard Views

Manage and approve work locations from the dashboard. Set up multiple locations and assign them to employees. With multiple locations, you can sort employees by work site, creating for efficient organization and management.

Mobile App Capability

With Breeze 360 Professional, and managers can review and monitor personnel from anywhere.

When remote work sites are activated, employees have the option to auto punch once they enter or leave the work site through permissions set on their mobile devices. Available on iOS and Android.
